EDUCATION

Computer Programming & Analysis

Seneca Polytechnic, GPA: 3.4

August 2027

Toronto, ON

EXPERIENCE

Software Developer Co-Op

Fall 2026

Ontario Public Service (MPBSDP, Cluster Applications Branch)

- Migrated a vendor-locked PaaS ticketing system to React and ASP.NET by building CRUD REST APIs and ticket submission forms, reducing platform dependency for 120+ Ministry of Finance users.
- Designed a cost-optimized AI coding workflow with model-tier routing, session-scoped context management cutting rework cycles and improving sprint throughput by 4+ hours.

Software Engineer Intern

Summer 2026

Sikh Sparks

- Architected a social media management platform adopted by 100+ Sikh organizations across Toronto, unifying content scheduling and cross-posting into a single system.
- Cut cross-platform publishing time by 60% by implementing a Spring Boot adapter-pattern layer that normalized 3+ platform APIs into one posting service and saved organizations an estimated 2 hours per week.
- Built a unified inbox using Meta's webhook and polling APIs, consolidating 4+ organization inboxes to help teams manage 200+ daily messages in one place.
- Leveraged Claude and AI agents to accelerate development velocity, shipping complex features end-to-end in days rather than weeks while maintaining code quality and team iteration cycles.

Software Engineer

December 2025 - April 2026

Liza Bilal Enterprise Inc.

- Reduced initial page load time by 22% by profiling and optimizing static assets through compression, lazy loading, and minification to improve responsiveness for users.
- Designed and shipped a client-facing website on AWS with a React frontend, driving online customer acquisition to 200+ users through a fully deployed user experience.
- Built an internal REST API with Express.js to automate report generation, eliminating manual workflow overhead and saving 2+ hours of administrative work weekly.

PROJECTS

Meal & Grocery Tracking Platform | Java, Spring Boot, AWS, EC2, RDS, CloudWatch, React, Docker, JUnit, Mockito, CI/CD

- Built and shipped a meal planning platform adopted by 100+ users, integrating 3 external REST APIs across 400+ recipes and reducing meal planning time by 2 hours per week per user through data normalization.
- Implemented an automated CI/CD pipeline with Docker, JUnit, and Mockito, reaching 86% test coverage and ensuring reliable deployments across AWS EC2 and RDS environments.

Rental Search App | GKE, Docker, RabbitMQ, CI/CD, Artifact Registry, Kubernetes

- Engineered a full-stack rental search platform powering 150+ successful apartment searches by aggregating listings from multiple sources and returning results in under 30 seconds.
- Scaled listing ingestion to 140+ results per search by dispatching RabbitMQ tasks to GKE worker pods, achieving stable parallel throughput across scraping and scoring pipelines.

RELEVANT SKILLS

Languages: JavaScript, Java, Python, HTML, CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Spring Boot, .NET, JUnit, Mockito

Cloud & DevOps: AWS (EC2, RDS, CloudWatch), GCP (GKE, GCE), Docker, Kubernetes, CI/CD (GitHub Actions)

Databases & Tools: PostgreSQL, MongoDB, Oracle, Git, Jira, VS Code, Claude, Cursor

EXTRA CURRICULARS AND ACHIEVEMENTS

- President, Google Developer Groups at Seneca Polytechnic – led 3+ technical workshops, growing chapter reach to 120+ student attendees per term.
- Group Leader, AWS Student Builder Groups at Seneca Polytechnic – designed and delivered an 8+ event cloud engineering curriculum for 75+ students.
